

## ADI Futures

### Index Futures on ADX General Index

Nasdaq Dubai's Derivatives Platform provides a unique opportunity for investors to trade **Index Futures** on the **ADX General Index (ADI)**. The ADI tracks the performance of the ADX market and is widely followed by local and regional capital market investors.

The ADI is an all-share index, hence it is constituted by all primary listed ADX companies.

The ADI Futures provide a convenient way to replicate the overall ADX market through a single instrument. They give the ability to hedge and implement portfolio management strategies.

## Benefits

**Leverage** is a key attribute allowing investors to invest in the ADI Futures contracts by paying only a fraction of the total value of the contract.

Both Individual investors and Institutional investors such as hedge funds can conveniently replicate their directional trading strategies using ADI Futures. **Shorting or selling** ADI Futures allows investors to trade based on their view on a falling market and profit from it.

ADI Futures facilitate easy **hedging** by institutional investors such as mutual funds which hold a portfolio of ADX listed stocks.

Index Futures trading is **cost-effective** as trading fees are low.

## How to Trade

Trading ADI Futures is simple. The futures contracts will be priced close to the ADI value.

### Example 1 Trade a Bullish view

ADI is at 4500  
Value of 1 Contract is  $4500 \times 10 = 45,000$  AED  
Initial Margin is 5%

**BUY** 20 ADI Futures Contracts @ 4,500  
Total Exposure =  $45,000 \times 20 = 900,000$  AED  
Total Margin blocked = 45,000 AED  
1 month later, ADI has risen 7% to 4815

**SELL** 20 ADI Futures Contracts @ 4,815  
Value Released =  $48,150 \times 20 = 963,000$  AED

**PROFIT** on trade  $963,000 - 900,000 = 63,000$  AED  
**Return on Capital\*** after 1 month is  $63,000/45,000 = 140\%$

### Example 2 Trade a Bearish view

ADI is at 4500  
Value of 1 Contract is  $4500 \times 10 = 45,000$  AED  
Initial Margin is 5%

**SELL** 20 ADI Futures Contracts @ 4,500  
Total Exposure =  $45,000 \times 20 = 900,000$  AED  
Total Margin blocked = 45,000 AED  
1 month later, ADI has dropped 5% to 4275

**BUY** 20 ADI Futures Contracts @ 4,275  
Total Exposure =  $42,750 \times 20 = 855,000$  AED

**PROFIT** on trade  $900,000 - 855,000 = 45,000$  AED  
**Return on Capital\*** after 1 month is  $45,000/45,000 = 100\%$

\*The above example ignores all trading costs such as **Buy-Sell spread** and broker commissions.

**Buy-Sell spread** - The difference in the price between the spot index and the futures price for a buy or sell order

### Standard Product Risks

Trading in futures carries risks for investors. These include losses that can be greater than the initial investment on account of leverage. It is recommended that investors seek advice before trading.
